**Paragraph 1:** Dr. Deutsch introduces himself. He asks for help from the audience to end the Coronavirus pandemic by getting vaccinated. He expresses frustration with Coronavirus and the social restrictions associated with it.

**Paragraph 2:** Dr. Deutsch argues that even young, healthy people need to be vaccinated to protect themselves from Coronavirus. He makes five points:

1. Almost all young, healthy people getting sick from Coronavirus are unvaccinated
2. The new strains of Covid are more harmful to young people than the old ones
3. Millions have died of Coronavirus
4. Coronavirus can have profound health consequences in many people who survive the virus, and long-term health consequences are still unknown.
5. The known and unknown consequences of Coronavirus are far greater for young people than the known and unknown consequences of the vaccine.

**Paragraph 3:** Dr. Deutsch acknowledges people's frustrations with the Coronavirus pandemic and the public health response to the pandemic. He suggests that people should not take out their frustrations on the vaccine itself, which is our best hope of ending the pandemic.

**Paragraph 4:** Dr. Deutsch states that without mass vaccination, Coronavirus will be with us forever. He says that people can get infected every year like the common cold, and that vaccines will only remain effective for a limited period of time.

**Paragraph 5:** Dr. Deutsch makes a call for mass vaccination of high school students, claiming that it would prevent outbreaks in school that students would pass to their families, potentially causing the death of family members.

**Paragraph 6:** Dr. Deutsch gives three examples of viruses which have been eliminated or greatly reduced through mass vaccination: Smallpox, Measles and Polio.

**Paragraph 7:** Dr. Deutsch delivers a call to action to vaccinate the world against Covid to protect the world against the devastating impact of the pandemic.

**Paragraph 8:** Dr. Deutsch raises awareness of upcoming vaccination efforts and explains the process of getting vaccinated. He argues that vaccine side effects are extremely rare and far less common than complications of Coronavirus for teenagers.

**Paragraph 9:** Dr. Deutsch explains how vaccines work and why they are safe. He mentions that most unvaccinated people are being denied access to vaccines and encourages everyone to reclaim their lives through vaccination.
